

# Mobile Video Surveillance

## Video Surveillance without limits

Little has changed in the CCTV industry over the past four decades — the industry still thinks about video surveillance as analog cameras tethered to a recording device or monitor via a COAX cable. Yes, new digital recording technologies have been introduced in the form of a proprietary DVR and IP Cameras have exploded onto the scene but the industry isn't solving new problems. Avrio Group is leading the industry in the application of information technology to solve problems in video surveillance that industry experts said were impossible just a decade ago. We are pushing the state-of-the-art forward and introducing new and creative ways to bring surveillance out of the confines of the building and into places where it is needed the most.

**Rapid Deployment** The Rapid Deployment Surveillance System (RDSS) can be used by tactical teams or security personnel to establish video surveillance covering large areas in a matter of minutes. The RDSS tower is light weight and completely portable and runs on battery for up to 12 hours of operation. It is truly a plug and play solution that brings video over a portable network to a mobile command station for archiving and live display.

**Mobility** The Titan and Mini Titan provide their users with a trailer-able solution for large scale towers (over 40 feet) where height, mobility and alternate power are critical factors for the surveillance solution. Each trailer is equipped with a power package that includes solar and wind as well as optional hydrogen fuel cell technology for complete autonomous operation no matter the climate or location.

**Alternate Power** The standard power package on the Mini Titan includes four 85 watt solar panels and a 250 watt wind generator. Three slow charge/discharge deep cycle 12 volt batteries provide over 300 amp hours of battery storage. The power system is designed to run 12 or 24 volt electronics including digital PTZ cameras, wireless transmitters and video servers, ground radar systems, GSM voice communications as well as UHF and VHF radios.

**Fixed and Portable Towers** For more permanent installations Avrio Group offers fixed and portable towers for video surveillance deployments. Depending upon the requirement, these towers can be configured for just about any height and weight requirements. These towers offer the ultimate in permanent and semi-permanent surveillance deployments.

## About Us

Avrio Group is a premier provider of IP-Surveillance solutions. By coupling an open software platform with 256 bit encrypted wireless mesh technology, sophisticated IP-Cameras and rugged/alternate powered camera and communications infrastructure Avrio Group is providing solutions that are solving unique problems today. From tactical response to long term autonomous and highly mobile video surveillance Avrio Group solutions are a cost effective way to extend video surveillance to the most remote areas of the world.
