

Public Safety Video Solutions

Extreme Video Surveillance

Avrio Group offers highly mobile and rugged video surveillance solutions uniquely positioned to meet the demanding needs of police, tactical teams and first responders around the country. Avrio solutions can be implemented quickly and cost effectively and can leverage a municipalities existing investment in camera technology and infrastructure. An Avrio IP-Surveillance solution is an integrated platform which satisfies an unlimited number of unique deployment characteristics including harsh environments, covert deployments, temporary deployments and high mobility.

Cost Effective, Rapid Deployments

At the center of these solutions lies an enterprise class video surveillance software solution that runs over a pure IP network. This means there is no proprietary hardware to drive up acquisition and maintenance costs. In addition, Avrio incorporates Wireless Mesh technology that is fully encrypted and self healing to provide the optimal backbone for the video to be delivered. Lastly, Avrio offers several camera infrastructure platforms depending upon the need including tripod(s), fixed towers, trailers, covert housings, and ruggedized domes — all of which can be powered through alternate means such as battery, solar, wind and hydrogen fuel cell. Consider some of the uses of these flexible systems:

- Crowd control and monitoring for special events
- Hostage situations
- High crime areas that move over time
- Monitor training operations
- Rapid need for increased perimeter security

About Us

Avrio Group is a premier provider of IP-Surveillance solutions. By coupling an open software platform with 256 bit encrypted wireless mesh technology, sophisticated IP-Cameras and rugged/alternate powered camera and communications infrastructure Avrio Group is providing solutions that are solving unique problems today. From tactical response to long term autonomous and highly mobile video surveillance Avrio Group solutions are a cost effective way to extend video surveillance to the most remote areas of the world.

Situation: Police respond to a school where there has been a report of one or more students holding other students hostage.

Challenge: Unable to see inside, the police have no visibility as to location and how many gunman are inside.

Solution: Preventative action. Had the school been equipped with a Avrio Group wireless IP-Surveillance system the officers responding could view the interior of the school from their vehicles

Situation: A large city has decided to crack down on several high crime areas.

Challenge: Need to have 24 hour surveillance but these areas change over time so fixed cameras are too expensive and time-consuming to move.

Solution: RDSS and the RD Pole Cam can be easily moved from area to area and their presence creates a deterrent. Pole Cams and Hidden Cams can also be used for covert operations.

Situation: A large Music festival has been plagued with theft and criminal behavior.

Challenge: The city police force can not assign enough officers to cover the large crowds that attend the festival and it is difficult to see over the crowds.

Solution: RDSS can be deployed around the festival creating a force multiplier by allowing officers to monitor multiple areas from their handheld and set up motion detection on areas off limits.
