

Rapid Deployment Video Surveillance

Video Surveillance without limits

Little has changed in the CCTV industry over the past four decades — the industry still thinks about video surveillance as analog cameras tethered to a recording device or monitor via a COAX cable. Yes, new digital recording technologies have been introduced in the form of a proprietary DVR and IP Cameras have exploded onto the scene but the industry isn't solving new problems. Avrio Group is leading the industry in the application of information technology to solve problems in video surveillance that industry experts said were impossible just a decade ago. We are pushing the state-of-the-art forward and introducing new and creative ways to bring surveillance out of the confines of the building and into places where it is needed the most.

Rapid Deployment The Rapid Deployment Surveillance System (RDSS) provides municipalities and government organizations with a comprehensive integrated surveillance system. Traditional city-wide deployments use fixed cameras, and a multitude of proprietary DVRs for recording and playback. This approach requires sophisticated cabling, expensive integrations and leaves the city with a rigid system that is unable to adapt to evolving crime. With RDSS, we have integrated multiple camera devices into a single, unified software platform. Whether the need is to quickly deploy live monitoring and recording in a tactical environment such as a hostage situation, easily move cameras around the city for month or year long deployments, or setup solar powered camera trailers, RDSS provides a low-cost integrated approach. This is all achieved through a low cost mesh backhaul and software that provides complete management of all video regardless of source. An optional module can be used within the system to add video intelligence on any of the cameras within the RDSS system.

RD Tactical Tripod The RD Tripod can be used by tactical teams or security personnel to establish video surveillance covering large areas in a matter of minutes. The tripod is light weight and completely portable and runs on battery for up to 4 hours of operation. The rugged PTZ camera supports up to 18x zoom. It is truly a plug and play solution, ideal for hostage situations or special events monitoring.

RD Pole Cam and RD Covert Pole Cam The Pole Cam is the ideal portable solution. By combining a high resolution IP camera and wireless mesh node all packaged in a single compact Nema rated enclosure, a municipality can easily port the cameras from one location to another. All it needs is power. Consider the RD Covert Pole Cam for covert operations.

Fixed and Portable Towers For more permanent installations Avrio Group offers fixed and portable towers for video surveillance deployments. Depending upon the requirement, these towers can be configured for just about any height and weight requirements. These towers offer the ultimate in permanent and semi-permanent surveillance deployments and can operate autonomously using Solar, Wind and even Hydrogen Fuel Cell technology.

About Us

Avrio Group is a premier provider of IP-Surveillance solutions. By coupling an open software platform with 256 bit encrypted wireless mesh technology, sophisticated IP-Cameras and rugged/alternate powered camera and communications infrastructure Avrio Group is providing solutions that are solving unique problems today. From tactical response to long term autonomous and highly mobile video surveillance Avrio Group solutions are a cost effective way to extend video surveillance to the most remote areas of the world. Contact us at 866.283.7378 or e-mail: info@avriogroup.com to learn more.
