

IP VIDEO SURVEILLANCE SOLUTIONS FROM AVRIO GROUP

Avrio Group is the nation's premier provider of IP-Surveillance solutions over wireless networks. Our portfolio includes network digital video recording and playback, content analysis and video intelligence, wireless and mobile surveillance, systems integration and turnkey surveillance solutions for the municipal and federal government markets.

Tomorrow's Video Surveillance Standard

Avrio Group provides pure IP-based video surveillance solutions for city-wide deployments, ports, airports and critical infrastructure. From the border to high-crime areas within cities across the United States, Avrio Group solutions are being utilized to aide law enforcement and security personnel in their public safety and homeland security initiatives. Avrio Group provides permanent and tactical video surveillance solutions, license plate recognition systems, gunshot detection and video analytics.

Below is a sample of the products and services we provide:

Content/Video Analytics

- Suspicious Object Detection
- Vehicle Detection
- Intrusion Detection
- License Plate Recognition

Network Video Management

- Record/Archive
- Search/Playback
- Live Monitoring
- Software Switching
- Video Walls
- Command Center Operations
- Event Management

Wireless Installation Services

- Turnkey wireless installations
- Survey and Audit Wireless Sites
- Wireless Site Development
- Project Management Services
- Site Preparation
- Installation of Antenna Structures
- Tower and Monopole Installation
- Antenna Installation and Alignment
- Radio Installation and Configuration
- Components for all RF Site Grounding Applications
- Testing and Provisioning services
- Maintenance service contracts

State-of-the-art Systems

Avrio Group offers several products and services that interoperate seamlessly to form a comprehensive surveillance solution. Called the Rapid Deployment Surveillance System (RDSS), this system includes both permanent and mobile camera units that can be easily deployed on street light poles and buildings. Our approach couples high-end IP cameras and high-throughput wireless backhaul radios in a NEMA enclosure (PoleCam) that can be deployed in a few days and easily relocated if the need dictates. Unlike wired solutions that are more time consuming and costly, our wireless video solutions can deliver upon fluid and lifelike video in real-time to a command and control center located anywhere in the City or even a mobile command center.

The Right Technologies

Avrio Group is partnered with technology leaders in their respective fields. Avrio Group provides the right technology, engineers and managers on our projects for an innovative approach, timely completion and tremendous value to the customer. Below are some of our key technology partners:

Past Performance to Guarantee Results

Avrio Group is entrusted by some of the largest cities in the United States for public safety as well as the Federal Government to provide technology solutions to protect our borders. The following is an overview of just some of our successes:

Local and State Government

Provided dozens of major U.S. cities with wireless video surveillance systems in support of public safety and port security initiatives. Systems included wireless mesh, point to point and microwave technologies as well as IP and analog camera systems with IP-based head-end equipment for a turnkey approach. Avrio Group currently supports these systems on a national basis through a call center located in Maryland.

Federal Civilian Agencies

Converted an aging analog CCTV system including hardware matrix switcher to 100% software solution. Leveraged existing analog cameras and provided new IP cameras in areas that required higher resolution and frame rates.

Department of Defense

Provided Army base with in-vehicle license plate recognition systems including camera, cabling, docking stations and electronics.

U.S. Customs and Border Protection

Avrio Group provides modernization to border patrol remote video surveillance system sites across the southern and northern borders of the United States. Tasks include Remote Video Surveillance (RVS) site microwave path realignment and project completion as well as modernization of head-end and command and control room equipment to convert analog video to IP.

Contact Us
